Research Proposal Review

<u>Which of the methods described in this week's reading would you think would suit your purpose?</u>
A mixed methods approach would be most appropriate for my proposal. It would involve qualitative analysis of misinformation examples alongside quantitative techniques, particularly leveraging machine learning to analyse and classify data.

<u>Which data collection methods would you consider using?</u>
I would likely use secondary data collection by sourcing an existing dataset from the X platform containing verified true and false information. This dataset would be essential for training and evaluating machine learning models.

<u>Which required skills will you need to have or develop for the chosen project?</u>
To carry out this project effectively, I will need to build my skills in natural language processing and machine learning. While I'm not currently an expert in these areas, I find the challenge motivating and look forward to developing these competencies.
